

A3: Normalised Laplacian Spectrum
All Four Traffic Datasets Bounded in $[0, 2]$

(a)

A6: Low-Rank $\mathbf{M}_k$
meta_dim=32, effective $r=7$

(b)

A6: $\mathbf{M}_k$ Cumulative Energy
 $r=7$ of 32 singular values $\geq 95\%$ energy

(c)

A6: CAdapter & TEWrapper Gating
All values satisfy $g \in [\varepsilon_g, 1 - \varepsilon_g] = [0.1, 0.9]$

(d)

A4: Stochastic Gradient Noise
Variance Bounded by σ^2 ($\text{lr}=1\text{e-}4$, $\text{grad_clip}=1.0$)

(e)
